

SCREENS (SC1-5)	SC1 - Dashboard	SC2 - Script Order LP	SC3 - Create Order LP	SC4 - Set pick up location LP	SC4 -Set pick up location LP	SC4 -Set pick up location LP	SC5 - Create Order LP (pick up location selected)
							
<p><b>DESIGN CHANGES MADE 18-Apr-18</b></p>	<p>Trying to get a new icon for supplies via team collaboration and voting system.</p>	<p>Created new icon for "create order".</p>	<ol style="list-style-type: none"> <li>Made this screen fun and desirable.</li> <li>Have user to add pick up location, date and time.</li> <li>Removed scan screen.</li> <li>Have user to tap a "CTA" to start to scan.</li> <li>Ability "Add to cart" from 3 levels - "Create order", "Scanned Script" and "Dispensing information"</li> </ol>	<ol style="list-style-type: none"> <li>Created 2 different ways of displaying search function including filters.</li> <li>Added: Phone number, "Ordered previously" label &amp; "powered by ERX"</li> <li>Combine Set a pick up date/ time capability when user selects a pharmacy.</li> </ol>			<ol style="list-style-type: none"> <li>Made scanning area. full screen with "information" and cancel ability.</li> <li>Have a pop-up how to and what to scan to help user scan their script.</li> </ol>
<p><b>:( PAINS (SC1-5)</b></p>	<p>A. Major: "Supplies" - labelling is not clear.</p> <p>B. Participants took about 1min to find the CTA to start scanning the script..</p> <p>C. Some participants went to "Records" to scan script.</p>		<p>A. Major: Task flow not clear. No priority between scan and set up pick up location.</p> <p>B. Participants selected "scan script" over 'Pick up location' was led by:              + prominent look of the scan window.              +the scanning priority when the script was on their hand.</p> <p>C. Allow freedom of accessibility - "Don't limit what user wants to do!".</p>	<p>A. Major: Labelling clarity: + "Available from this pharmacy" depicts the medication available from the pharmacy.</p> <p>B. "Find pharmacy" is tricky. Users do not always remember the name of the pharmacy. Users remember landmarks. So, having map view is useful.</p> <p>C. Search by Current location - not commonly used. Often search nearby house or GP (trusted / familiar. pharmacy).</p> <p>D. Search results - too much information.</p>	<p>A. Competing icons: favourite and selection icons.</p> <p>B. "O" icon wasn't intuitive until they tapped on it.</p> <p>C. "O" icon led participants to select just within it.</p>	<p>A. Quick filter - Hidden filters not noticeable.</p> <p>B. Filter - shouldn't be place parallel to Map/List view.</p> <p>C. Quick filter icon: misleading. This is a "more options" icon.</p>	

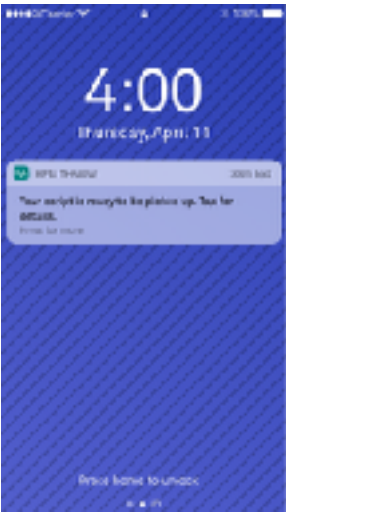

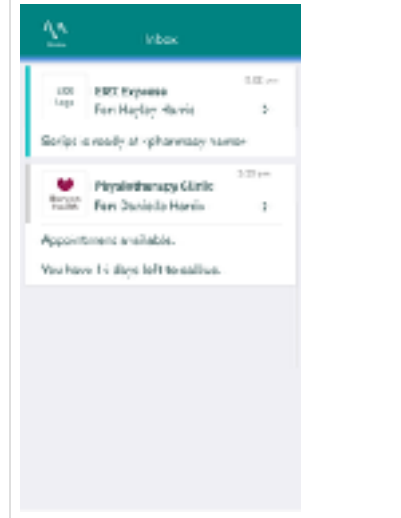

<p><b>:) GAINS (SC1-5)</b></p>	<ul style="list-style-type: none"> <li>• Shopping bag icon.</li> <li>• Label "Supplies" makes sense to the users that are on medication.</li> </ul>	<ul style="list-style-type: none"> <li>• All participants selected "Create order".</li> <li>• "info" is good to have.</li> </ul>	<ul style="list-style-type: none"> <li>• Instructions is helpful.</li> </ul>	<ul style="list-style-type: none"> <li>• Quick filter.</li> <li>• No issues with "O" to select location.</li> <li>• Good to have all info up front</li> <li>• Map view is great to see what's nearby house.</li> </ul>	<ul style="list-style-type: none"> <li>• Favourite symbol: Some participants don't mind to add to favourite.</li> </ul>		<ul style="list-style-type: none"> <li>• Ability to see pick up location.</li> </ul>
<p><b>+ IDEAS FEEDBACKS (OPPORTUNITIES) (SC1-5)</b></p>	<p>Supplies Icon: +Shopping cart with medication symbol +Barcode symbol</p> <p>+Make "+" bigger / brighter.</p> <p>Labelling: +Shop +Order +Prescription order +Medications</p> <p>4 Participants suggested: +Pharmacy</p>	<p>Icon: +"capsule" symbol for create order</p> <p>+ Make labelling clear.</p> <p>+ Add header.</p> <p>+ Add brief instructions.</p> <p>+ Chemist Warehouse users familiar with the term "Medication".</p>	<p>+Have a "Scan " CTA rather than an open camera window to avoid distraction.</p> <p>+Have a show and hide - prioritise tasks based on user types. (Hide scan, to let new user set the location first. Once selected, then show scan).</p> <p>+ "Pick up location" wording accuracy - Try "Pharmacy".</p>	<p>+ Have a short instruction.</p> <p>+ +Have phone number up front.</p> <p>+Remove "O" icon. Have just the location card. When user taps, show the ticked icon. Bring the ticked icon to the create order page.</p>		<p>+Quick Filter - Should be visible like care contact. (A/B tests were done comparing hidden and visible like care contacts.</p> <p>+ Search function: Ability to search by postcode, suburb.</p> <p>+ Simplified search results - have a single view. Tap to view details.</p>

Iteration 2 17-18 Apr -18 (in collaboration with the team)

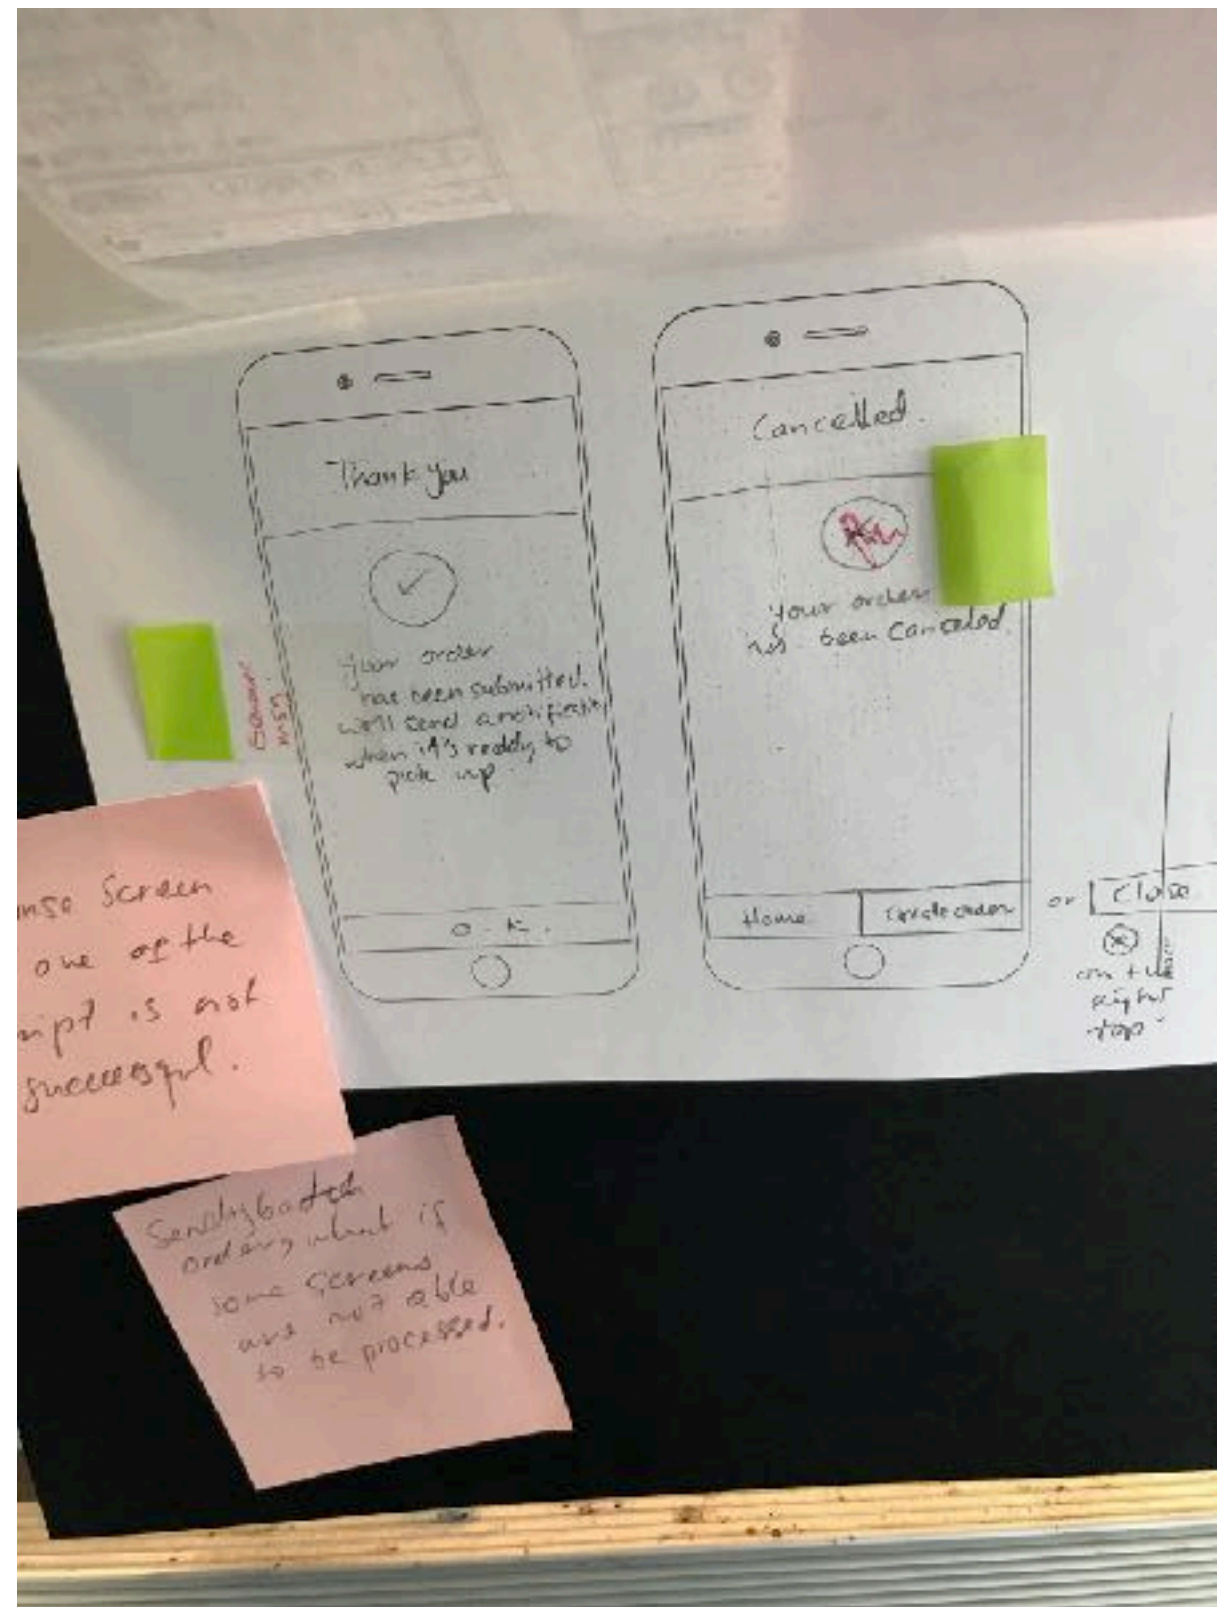

VISIBLE SEARCH FUNCTION

HIDDEN SEARCH FUNCTION (NEW)

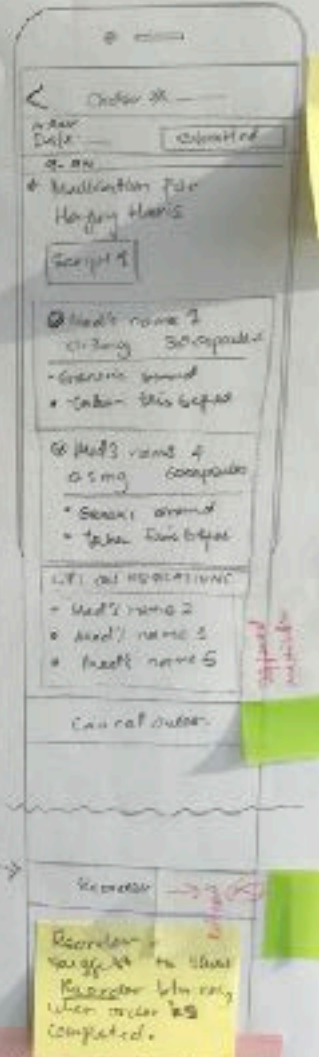

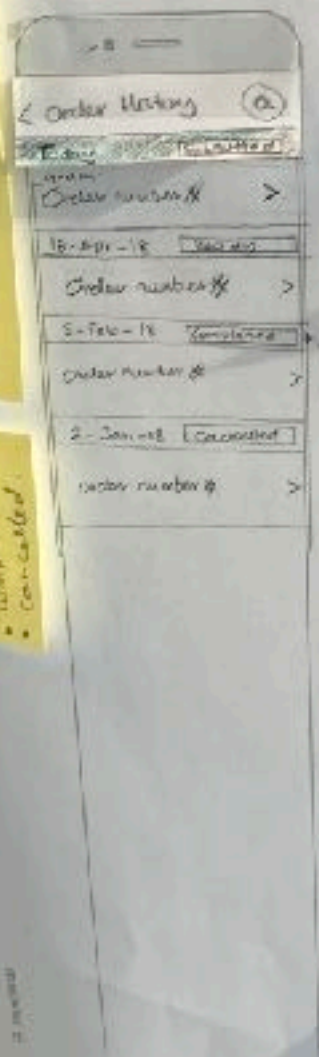

ORDER HISTORY PAGE & ORDER PAGE

Search capability +  
Filter

Order of Dates =  
Filter + time  
+ dates

Status =  
+ Shipped  
+ Cancelled  
+ Completed

Template style =  
+ List view style

Approved  
cancel

Reorder  
you get it in that  
Reorder button  
when order is  
completed.

Not ready to  
pick up.  
So it have  
cancel -> but  
put a note ->  
could you  
pharmacy

## Feedback collected by Christabel Sy during workshop: (copied from her email 19-Apr-2018)

### Selecting a Pharmacy / Date and Time:

1. On searching for a pharmacy, **prioritize eRx pharmacies** at the top of the search results
2. If the user selected a non-eRx pharmacy, we want to **capture analytics** to enable us to know which pharmacies are preferred by the user. This can be used for sales and marketing. We also have the option to prompt the user but doing it in the background is what is preferred at this point
3. We want to let the user know before they even get the search results (during Loading) that the list returned are pharmacies where they can only place an order with (those only signed up with eRx)
4. If no pharmacies returned from the list, we **can expand the radius of the search** but this will depend on what is available on eRx.
5. Option: We can **load all the pharmacies from Fred into our system** along with the Google Places ID. We will have to run a batch daily to check for new pharmacies onboarded onto Fred. (Technical Dependency) The **Google Places ID** is required for eRx pharmacies to be able to link back to our care contacts.
6. **Onboarding**: Ideal to have a first time/onboarding experience when the user lands on Order Medication.
7. **Ordering from Add Care Contacts** – Provide an option to order from an eRx pharmacy when added to the care contacts list. User can order either from Care Contacts or from Order Medications

### Scanning Script/View List of Meds/Review/Submit Order:

1. How to identify users that have the same name but different date of birth? Currently in the payload, the SCID only returns the First Name and Last Name of the patient.
2. During meds selection, we can **track what the user has unselected** and use that as **the default setting/preference** the next time they start an order.
3. Consider scenarios on **when to disable and enable Add to Cart**. For example, disable the Add to Cart when nothing is selected from the list of medications.
4. **Error handling during script submission**: (1) we can queue the order per script (2) we can let the user know which one had failed and ask them to manually resubmit the order.
5. **Contact Details on Order**: Include contact details of the user so that the pharmacy can call them when a certain med is not in stock/clarifications.
6. We want to **save order as Pending Orders**. This can occur when the user scanned the script and placed the app on the foreground. We can store the SCID, ItemIDs on the device for a certain period of time. The user can continue/resume the order creation/submission. Note that most scripts are valid for a year except dangerous drugs.
7. There should be no limitations/restrictions on the number of scripts that the user can scan and submit but the integration submits one script at a time.

### Order History:

1. Always have the **Cancel button** on the order and also provide a way for the user to call the pharmacy.
2. If the user cancels the order that has been submitted, will we allow them to **resubmit the order**? We can save the details of the cancelled order for the user to retrigger this but it will be treated as a new order.

### Terms of Use/Privacy:

1. Fred is looking to replace the eRx app with the HealthNow script order feature. Fred/eRx terms of use/privacy are required to be included/referenced in HealthNow.
2. Support details are required to be specified for users

### Design Considerations:

1. Consider how to display errors on the UI
2. Consider looking at what design patterns have been built on the app for viewing list of meds

### Future Considerations:

1. Camera option on the Dashboard
2. No need to scan on repeat SCIDs.

**20-Apr-2018**

**Next step: To digitise wireframe (design iteration 3)**

**List of items REQUIRED to complete design iteration 3.**

1. Wording and content check needed before digital design starts.

**= Pending**

2. Finalise flow and interaction.

= [Checked with Gleb and Christabel \(20-Apr-2018\)](#)

3. Do we take out the “set location and time” at “create order” page and let patient enter it on “review order page”?

= [Discussed to keep this step at “create order” page.](#)

4. What are we displaying after a patient scanned a script? Current 3-nagivation hierarchy on wireframe\*:

A. Patient Name

B. Script Identifier (TBD)

C. Medicine name

**= Pending**

5. What are we counting in the cart? Medicines or script? What do we show?

= [Discussed to have “Checkout” after patient scanned the script and auto route to “review order” page. We counting total of scripts.](#)

6. In “Set a pick up location” - Have a CTA for map view & selection icon for list with label “Powered by ERX” so patient know they can only select from this pharmacy.

A. Asset needed : ERX logo

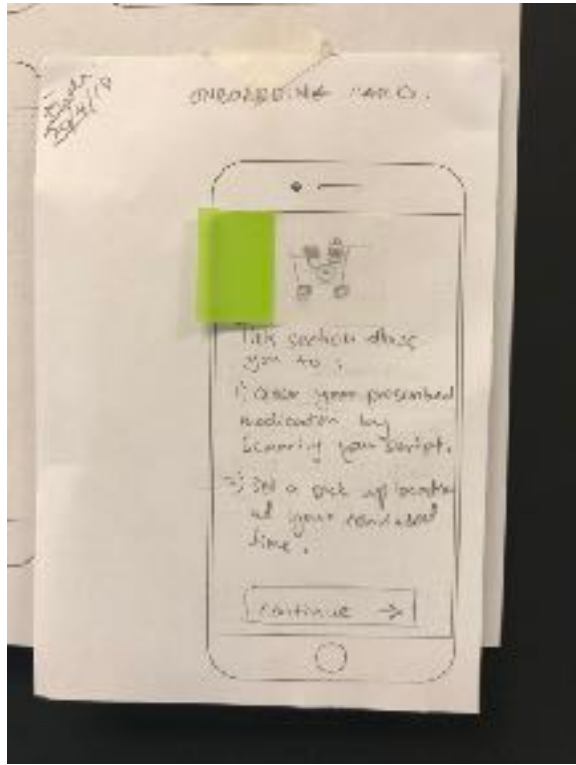

**=Pending**

7. In list view we attempted to show results from ERX and Google. In Map view if we want to show all pharmacies, I suggest to have different icon for non-ERX pharmacy.

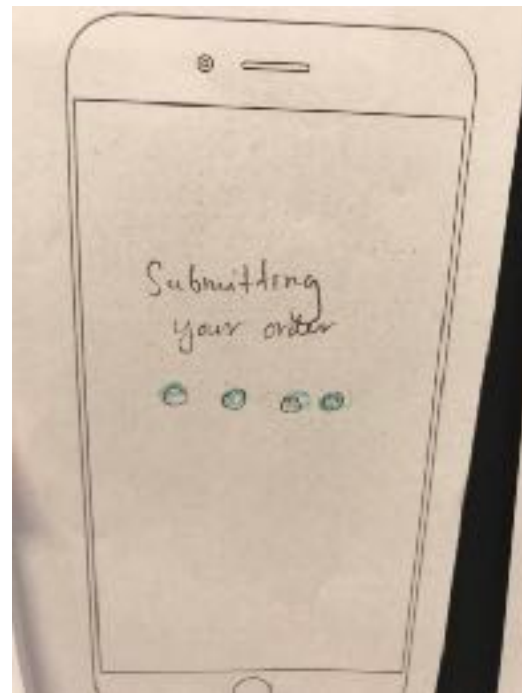

= [Lily to create icons for supported by ERX and non-ERX.](#)

8. Onboarding-experience for first time user - persuasive wording required.

**= Pending. Draft is as following. Experienced user will be able to see this again by tapping “i” on “create order” page.**

9. Loading page after script being submitted:  
= Discussed and given 2 options as following.

10. List of error messages - what are they / what are the scenarios we need these messages for?

= Pending content. See Christabel's comment, no4 above. And see the above screen.

11. Noddy's idea to follows the current architecture will be used if:

- we have complexity getting script identifier & deciding whether we can use first, mid or last name to identify the patient.
- 3 layer navigation is taking up a lot of space in small screen mobile.

= Solutions as the followings.

**Tasks:**

Gleb - Will be able to start (alpha version / prototype) without having to wait for the digitised design

Lily - To check content with Tim on Tuesday 24April, before digitising. To collect assets and data from business team.

Business team - To identify and prepare types of data to display on “scanned script” level page. To get ERX logo.

Tim - To work with Lily on Tuesday to craft wording.
